

# Welcome to Primary Maths at GBA

**My name is Harry and I am really looking forward to working with you over the coming year.**

**My lessons are good fun and, if you work hard in the sessions, you will learn a lot, build confidence and become a maths master in no time!**

## **What will you need?**

- Computer, laptop or tablet for Zoom meeting
- Pen or pencil
- Resources printed out (from uploaded docs on Tutor Cruncher)
- Spare paper

## **How will it work?**

### **PART 1 : WARM UP**

**Arithmetic practice including times tables and mental maths skills**

### **PART 2: LEARN**

**I will teach you a new mathematical concept and demonstrate how to do it step by step.**

### **PART 3: CONSOLIDATE**

**Your turn! We will work together to practise our newly learned skills**

### **PART 4: APPLY**

**Practice questions to assess what we have learned and deal with any misconceptions**

**Please log into the session 5 minutes before the start time so you can start the warm up activity while you wait for the lesson to begin.**

## **Homework**

I provide homework for the children to complete after the lesson. This is to consolidate their learning and encourage good learning habits.

The answers are given so that children can learn to self-mark and assess their own understanding.

## **Progress and Assessment**

I will email through a baseline assessment to be completed before the first lesson. This will enable me to gauge the children's individual levels and help me to plan the lessons appropriately. The final session of each 7-week block will be a progress assessment and I will feedback on each child's individual strengths and areas for focus.
